

## 2014 New Fellowship Opportunity for Korean Post-doctoral Researchers Coming to NIH

Under a new bilateral partnership between NIH and the Ministry of Science, ICT and Future Planning (MSIP), a new Post-doctoral Researcher Fellowship has been created.

The Korean Biomedical Scientist Fellowship Program (KBSFP), supported by the Korean Research Institute of Bioscience and Biotechnology (KRIBB) of the MSIP, in cooperation with NIH, will offer a two-year fellowship award to support biomedical and behavioral research projects with potential commercialization by early-stage Korean post-doctoral researchers at NIH laboratories.

Applicants must meet the following criteria: 1) Be a Korean citizen or permanent resident of Korea; 2) Received at least one degree in Korea; 3) Obtained a doctoral degree, equivalent to a Ph.D., within the previous five years as of June 30, 2014; and 4) Meet the eligibility requirements for NIH's Intramural Visiting Fellow Program. Applications are submitted directly to KRIBB and reviewed by a scientific panel composed of senior Korean scientists. Up to 25 Fellowships but possibly fewer depending on application quality and funding availability will be awarded by KRIBB. As part of the application package, the applicant must submit a recommendation letter from the applicant's sponsoring NIH lab host/mentor indicating an invitation to come to the lab, if applicant is awarded the fellowship. **Application deadline is JUNE 30, 2014.**
