Postdoctoral Research Position at the National Institute of Mental Health (NIMH)

The Mood and Anxiety Disorders Section of the Human Genetics Branch of the NIMH Intramural Research Program has an immediate opening for a post-doctoral scientist with interest in genetics, genomics, and neurobiology to join a dynamic group of investigators studying genes involved in the etiology of major mental illness. This inter-disciplinary group of scientists investigates the genetic basis of severe mental illness using a variety of approaches, including next-generation sequencing, GWAS, transcriptomics, and iPSC-derived cellular models. Applicants must hold a recent MD and/or PhD degree in medical, biological, or mathematical sciences and be willing to commit to two to 6 years of full-time research and training.

Please send CV to:

Francis J. McMahon, MD
Chief, Human Genetics Branch
mcmahonf@mail.nih.gov

Details on the application process, salary, and benefits may be found at
<https://www.training.nih.gov>.

Application Deadline Date: December 31, 2019

The NIH is dedicated to building a diverse community in its training and employment programs.
